

Toxic Substance Control Act Regulation (TSCA)

January 2026

As amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act the Toxic Substance Control Act (TSCA) consider the five final rules outlines by the Environmental Protection Agency (EPA) on January 6, 2021. With the aim to reduce exposures to certain chemicals that are persistent, bioaccumulative and toxic (PBT). These chemicals build up in the environment over time and may result in potential risk to exposed populations, including the general population, consumers and commercial users.

The rules limit or prohibit the manufacture (including import), processing, and/or distribution in commerce (including within articles):

- **Scope:** Covers most commercial chemical substances/mixtures, but excludes specific items like food, drugs, cosmetics, and pesticides (regulated under other laws).
- **Existing Chemicals (Section 6):** EPA evaluates risks of chemicals already in commerce and may restrict or ban them (e.g., PCBs, asbestos, lead-based paint).
- **New Chemicals (Section 5):** Manufacturers must submit a Pre-Manufacture Notice (PMN) 90 days before producing or importing a new chemical.
- **Significant New Use Rules (SNURs):** EPA must be notified if a person decides to use a chemical in a way that is not currently common.
- **Inventory (Section 8b):** EPA maintains a public inventory of all chemicals manufactured or processed in the U.S..
- **Compliance:** Violations can result in severe penalties; compliance is critical for manufacturers, importers, and processors

Invertex have reached out to suppliers at all stages of our supply chain, requesting their TSCA declarations, to certify that they are compliant with the requirements. Affirming that none of the above chemicals are intentionally used or added to their products. Therefore, we can confirm to the best of our knowledge that we are compliant with this regulation.
